The next step in the evolution of the NEM-cutter

THE III. GENERATION OF OUR PATENTED NEM-TOOTHING

- Perfectly adapted to the latest materials and working methods
- Especially efficient, effortless and controllable working
- New crosscut: fine chip breaker as closed ellipses
- Group toothing with up to 9 groups – coarse and fine toothings alternate per turn
- Unmatched cutting performance with smooth surfaces at the same time
- Easy penetration behaviour into the material – for a safe working method
- Very fine and grainy chips – do not pierce the skin
- Application: Metal cutting, especially viscose non-precious alloys, like cnc-milled or laser sintered structures
